

User Story ID:	TVM_TC_001
User Story:	As a user I want to list all the options in terms of available fare, so that I can select the pertinent option.
Formulated By:	Jatan Gohel
Implemented By:	Ashutosh Gunjal

The user story is implemented by screens /pages mainly,

- Index.html page (Main page from where application begins)
- Following are the list of pages created in support of index page
 - 1trip.html
 - 2trip.html
 - unlimited_evening.html
 - unlimited_weekend.html
 - 1_Day.html
 - Weekly_pass.html

Index.html is the initial screen of Available ticket fares list, wherein user will be able to see different ticketing options. Once user will click on the respective option for which he wants to find a ticket, he will be redirected to another page wherein, the description with fare details will be shown.

After clicking on one of the fare option, user will be redirected to next page wherein, Description, Validity and Fares details about the selected fare option.

The implementation can be integrated with the payment and other user stories to make it fully functional as a completed Ticket Vending Machine.

Instructions to Run:

- Double click on index.html
