

User Story	ID : TVM_TC_002 Statement: As an anglophone user, I want to have the ability to read all the available options in English, so that I can understand them
Formulated By:	Surya Prakash Govindaraju
Implemented By:	Ghalia Elkerdi

The user story was implemented in its simplest form, using two frames:

- A landing page: ListOptions
- An extensive list of all options shown in the selected language: BilingualOptionsList

The TVM supports both French and English languages. The landing screen prompts the user to make a selection. Upon selecting the language, the user may move on to the next screen which would essentially display all the transit fare options. These are: single trip, round-trip, whole day pass, weekly pass and monthly pass. The user is also given the option to navigate back to the home page.

This implementation can be integrated with other stories and does not provide any fully functional standalone features in and of itself. It is merely a stepping stone towards building the Ticket vending machine.

Instructions to run:

- Double Click on the Executable JAR file (Ghalia_D2_listopts.jar)

Or

- Download the src files
- Run as a Java Application

Or

- Open CMD
- Go to your ".jar" file directory
- Command: java -jar jarfilename.jar (java -jar Ghalia_D2_listopts.jar)
