

User Story	<b>ID :</b> TVM_TC_003 <b>Statement:</b> As a user, I want to be able to see a summary of my order before finalizing my purchase, so that I can confirm correctness.
Formulated By:	Kundana Gangam
Implemented By:	Surya Prakash Govindaraju

The user story is implemented using the three screens\Pages mainly,

- TransitPurchase Page
- FareQuantity Page
- Summary Page

The transit purchase and fare quantity are the initial screens of Ticket vending machine where the user selects his\her choice of transit type and quantity. The transit purchase contains all the available transit types like 1 trip, 2 trip, unlimited evening and weekend etc. The Fare quantity contains number of quantities of ticket from 1 to 5. Once the user has selected number of quantity, he\she will be directed to the summary of purchase screen to validate for correctness and proceed to payment. The Summary screen lists the below details.

- Transit type selected
- Quantity
- Total Price

Upon verification, the user can proceed further with payment or change his\her selection going back to home page.

This implementation can be integrated with the payment and other user stories to make it fully functional as a completed Ticket vending machine.

Instructions to run:

- Double Click on the Executable JAR file (D2.jar)

Or

- Open CMD
- Go to your ".jar" file directory
- Command: java -jar jarfilename.jar (java -jar D2.jar)
